0580_w24_ms_22_Q6

Question	Answer	Marks	Partial Marks	Guidance
6	4.5 oe	**2**	**M1** for $\frac{1}{2} \times 6 \times (x + 9.5) = 42$ oe or $42 \times \frac{2}{6} - 9.5$ oe	Allow $\frac{9}{2}$ for 2 marks. Answer $\frac{27}{6}$ scores max M1. e.g. • $6 \times x + \frac{1}{2}(9.5 - x) \times 6 = 42$ • $\frac{1}{2} \times 6 \times 9.5 + \frac{1}{2} \times 6 \times x = 42$ • $9.5 \times 6 - 42 = \frac{1}{2} \times 6 \times (9.5 - x)$ i.e. method can be done in stages without referring to x e.g. for the last bullet point: 9.5 × 6 – 42 = 15, then 15 × 2 ÷ 6 = 5 then 9.5 – 5 = 4.5 e.g. 14 – 9.5, $\frac{42-28.5}{3}$
