0580_w24_ms_43_Q10

Question	Answer	Marks	Partial Marks	Guidance
11(a)	7	**1**		
11(b)	$-4x^2-12x+13$ final answer	**4**	**B1** for $(2x+5)(1-2x)$ **B1** for $2x-4x^2+5-10x$ oe **B1** for $2(1-2x)+5$	
11(c)	$\frac{1-x}{2}$ oe final answer	**2**	**M1** for $x=1-2y$ or $2x=1-y$ or $\frac{y}{2}=\frac{1}{2}-x$	Accept $-\frac{x-1}{2}$ $\frac{x-1}{-2}$
11(d)	$\frac{2}{3}$ oe	**2**	**M1** for $\mathrm{h}\left(\frac{1}{2}\right)$ or $\frac{1}{\frac{1}{x+1}+1}$ oe	For 2 marks allow 0.667 or better For M1 allow $\frac{1}{1.5}$ $\mathrm{h}\left(\frac{1}{2}\right)$ implied by $\frac{1}{0.5+1}$ or [hh(x) =] $\frac{x+1}{x+2}$
11(e)	$\frac{-x-4}{(2x+5)(x+1)}$ or $\frac{-x-4}{2x^2+7x+5}$ or $-\frac{x+4}{2x^2+7x+5}$ final answer	**3**	**M1** for $x+1-(2x+5)$ oe **M1** for common denominator $(2x+5)(x+1)$ seen	For both M1, accept as two separate fractions with a common denominator. Implied by correct expansion. Allow recovery from poor notation, eg $2x+5\ (x+1)$ written out initially with $(2x+5)(x+1)$ or $2x^2+7x+5$ in final answer.
11(f)	–5	**1**		
11(g)	1	**1**
